

SERINA TRADING has evolved from being a kaolin-mining company to a trading company offering the following raw materials to the coatings and related industries:

- Kaolin: **HW POWDER** is used as opacifying filler and has an average particle size of 2 microns. **ALUSIL SX** has a finer particle size of 1 micron and is usually used in sheen paints.
- Calcium carbonate: We hold stock in Cape Town of 2, 5 and 10 micron calcium carbonate as well as a coated 2-micron grade. This imported material compares favourably with its competitors.
- Bulk bags: We can offer bulk bags customized to your specifications. These quality bulk bags are imported from India at very competitive prices.

Please call or email us for quotations on the above products and we will be happy to oblige.
